INTRODUCTION

The legislative framework for this sector-specific guide is made up of the applicable government measures and advice from the National Security Council, as ratified by various ministerial decrees. Based on the situation as per 26 March 2021, this version has been amended in line with the recommendations of the Corona Commission and covers the 6 golden rules and 10 commandments to be satisfied by all sector-specific guides and protocols. This sector-specific guide is published on the website of the FPS Employment, Labour and Social Dialogue and the Mediarte social fund.

This sector-specific guide complements the generic guide against the spread of the coronavirus developed by the High Council for Prevention and Protection at Work:

https://werk.belgie.be/sites/default/files/content/news/Generiekegids_light.pdf.

It forms a sector-specific application for the audiovisual production sector of the basic principles of the generic guide referred to above and aims to minimise the risk of Covid-19 contamination in audiovisual productions.

The guide focuses on the development, pre-production, production and post-production of audiovisual productions in a broad sense.

Because every audiovisual production is different, it is up to the parties involved (those responsible for production as well as financiers) to determine, per project, how this guide can best be translated into COVID-19 guidelines for the production in question (shooting/recording in the studio, on location(s), etc.) and, taking into account all necessary precautions, to determine whether an audiovisual production can proceed at any given time.

DECLARATION OF HONOUR

Anyone wishing to participate in a production ('X') must sign a declaration of honour:

I, (first name and last name), hereby declare that I

- will strictly comply with all government-imposed measures against the spread of the COVID-19 virus (including in the private sphere);
- have not had any Covid-19 symptoms in the past 14 days (cough, fever, sore throat, loss of sense of taste, difficulty breathing);
- will immediately inform the covid-19 coordinator if, after signing the declaration of honour, I display one (or more) symptom(s) of COVID-19; and
- am aware of the COVID-19 guidelines attached to this statement, and expressly acknowledge the importance of compliance with each of these rules to reduce the risk of spreading COVID-19 during production and ensure that I will comply at all times.

Done and signed in (place), in duplicate on (data)

SIX GOLDEN RULES & 10 COMMANDMENTS

There are a number of fundamental rules to fight the spread of the COVID-19 virus, on which every sector-specific guide - this one included - is based.

6 gouden regels

Respecteer de
hygiëneregels

Doe je activiteiten
liefst buiten

Denk aan kwetsbare
mensen

Hou afstand (1,5 m)

Beperk je nauwe
contacten

Volg de regels over
bijeenkomsten

11 miljoen redenen om vol te houden

1. Wash your hands regularly
2. Take your activities outside
3. Look out for vulnerable people
4. Keep your distance (1.5m)
5. Limit your close contacts
6. Respect the rules about gatherings

The 10 basic elements, adapted for audiovisual production activities in this sector-specific guide, are as follows:

1. Follow the laws in force
2. Appoint a COVID coordinator
3. Communicate, inform, motivate
4. Social distancing
5. Hygiene
6. Cleaning and disinfection

4

7. Ventilation
8. Personal protection
9. Management of people who test positive
10. Compliance and enforcement

COMPLIANCE AND ENFORCEMENT

As set out in greater detail in point 1 below, the COVID coordinator ensures strict compliance with this sector-specific guide on set.

I. GENERAL GUIDELINES

These guidelines apply to everyone who participates in a production, in addition to specific guidelines that apply per technical department.

1. The production manager designates a person from the production staff whose job it will be to closely follow the compliance with the COVID-19 guidelines for the production on the set. This person is in charge of preventing risks and checking the proper application of the imposed measures and managing the related logistics. This person should also verify that all agreements and actions described in this sector-specific guide are respected, as well as collecting and reviewing all documentation related to the management of professional risk prevention. This person is also the first point of contact for any questions and/or reports and collects all information. Contact details for the production's COVID-19 coordinator are stated on every call sheet.

RISK LIMITATION

2. Anyone who is sick or has any of the COVID symptoms (cough, fever, sore throat, loss of taste or difficulty breathing) must stay at home and immediately notify his employer/client. If you have symptoms, consult a doctor and have them tested if necessary.
3. Anyone who shows symptoms in the course of a day of shooting/recording must also go home and consult a doctor.
4. If someone in your immediate environment (cohabitating) is infected but you do not have any symptoms yourself, consult a doctor to determine whether and how long you should be

5

quarantined at home or if you can continue working.

5. It is, of course, recommended that production employees regularly check their temperature. Production managers may exceptionally measure the temperature of employees during this crisis period, provided that these measurements are not recorded. (Note: medically speaking, however, this isn't necessarily helpful because it is possible to conceal a fever with antipyretics, because people without a fever can also transmit the COVID-19 virus and because not everyone with a fever has COVID-19.)

SOCIAL DISTANCING

6. All production workers must respect the 1.5m distance rule. NO physical contact when greeting: no handshakes and no kisses. Actors, presenters and participants in TV and radio productions must apply social distancing on set to the extent possible.
7. A site plan must be made of the site that clearly shows who should be present at which location. This must be communicated in advance so that everyone knows clearly which zones they can/cannot enter. The zones must be clearly indicated on the site itself. If possible, use markings, ribbons, or physical barriers to demarcate zones or places, or mark on the ground how much distance to keep.
8. The number of people present per location must be kept to a minimum. For each location/zone on the site consideration must be given to who needs to be present. If possible, extra monitors should be provided so that the set can be viewed remotely, in order to limit the number of people per location. The call sheet lists everyone present for the shoot day.
9. Everyone must stay within the location(s) designated for him or her. No mixing between departments unless necessary.
10. Do not touch anything, except for your own/personal items, do not leave any items behind or move anything, even if you are simply trying to be helpful.
11. If it is not possible to keep 1.5m distance between the different people's working areas: preferably use collective protective equipment such as screens or walls to compartmentalise working areas, and/or organisational measures, e.g. staggering working hours and breaks, flexible hours, shift work, adjustment of order of activities, ... If not, appropriate individual protective equipment (face masks) should be used.
12. Markings must be placed in catering areas so that it is clear that you are 1.5m apart. Where necessary, meals should be served in shifts or at different locations to limit the number of people per location. The dining area must be disinfected after each shift.

13. Avoid using lifts (elevators). If that is not possible, limit the number of people using the lift at the same time (e.g. allow only 1 person in a smaller lift), keep your distance and stand back to back. Provide one-way traffic or priority rules on narrow stairs or other passageways where people cannot keep a sufficient distance when passing each other (e.g. priority for those coming down).
14. Try to avoid contact by using walkie-talkies, online chat or telephone during working hours (to avoid walking in and out of production offices). Use personalised equipment (own walkie-talkie, own phone).
15. All employees are requested to do as much preparatory work as possible from home (production, props, clothing, technical preparations, etc.)
16. External parties may not be allowed on set (set visits, press, investors, etc.). If desired, monitoring and streaming can be provided remotely.

HYGIENE MEASURES

17. Respect the hygiene rules:
 - o Wash/disinfect your hands regularly and in any case on arrival at the set, before leaving the set, after blowing your nose, after traveling by public transport, before eating and after using the sanitary facilities.
 - o Cough or sneeze into a tissue. Use a new tissue each time and dispose of it in a sealable trash can (pedal bin).
 - o If you don't have a tissue handy? Cough or sneeze into the inside of your elbow.
 - o Do not touch your face with your hands. This will prevent you from getting infected.
18. Each employee must have a personalised prevention package containing a face mask, hand gel (min 80% alcohol), a personal drinking bottle/coffee cup. The idea is that you only use this one and that you wash it (if reusable) yourself at home.
19. Each external supplier must provide this prevention package for his/her employees. A list of reliable points of sale will be made available.
20. Anyone who is not on camera must wear a face mask. For information on how to wear face masks correctly: See <http://www.info-coronavirus.be/nl/mondmasker>.

21. If you use the toilet, disinfect the door handle when leaving the restroom. Disinfect your hands with disinfectant gel (preferably provide no-touch dispensers, rub gel on hands but do not dry) or wash with soap and water and then dry with paper towels.
22. Leave doors open as much as possible - taking into account the fire safety regulations - and avoid grasping the handle with your hands (e.g. open with an elbow). The same applies to the banister, lift buttons, light switches, handles of cabinets and drawers, taps of washbasins, control knobs of appliances and machines, etc. Use disinfectant wipes if you cannot avoid this.
23. Provide adequate ventilation everywhere. Provide adequate and regular ventilation of the work areas and social facilities, either through natural or mechanical ventilation:
 - ensure proper maintenance of ventilation and/or ventilation systems, check whether additional measures are required for systems with air circulation;
 - do not use individual fans (which can spread the virus);
 - in case of mechanical ventilation, the 'air recirculation' function must not be on.
24. Be alert for contamination during deliveries: always wash/disinfect your hands after receiving deliveries.

DISINFECTING WORK AREAS AND EQUIPMENT

25. Work areas must be disinfected on a regular basis (minimum daily).
26. Surfaces must be disinfected with one of the following disinfectants (to which no other cleaning agents are added):
 1. Liquid Alcohol (min.) 70% ;
 2. Chlorine bleach solution containing at least 0.1% sodium hypochlorite (1000 ppm). Concretely: if you use 40 ml of [javel \(bleach\)](#) to 1 litre of tap water, you will remain above the required 1000ppm for almost every type of bleach. However, it is still advisable to always check the sodium hypochlorite content of the chlorine bleach on the packaging label.
 3. Hydrogen peroxide 0,5%; or
 4. Dettol Medical 5%

Dirt can reduce the effect of disinfectants: always clean dirty surfaces with soap and water first and let them dry before disinfecting.

(source:

https://www.apb.be/APB_LIBRARY/PUBLIC/CORONAVIRUS_DESINFECTIE_HANDEN_OPPERVLAKTEN_15_09_20.pdf)

27. Equipment on set should be disinfected preferably with 70% isopropyl alcohol wipes or other disposable wipes with an alcohol content of at least 70%.
28. Provide sufficient disinfecting kits for surfaces and equipment.
29. The cleaning team must wear protective clothing.

TRANSPORT

30. The generally applicable principle is that all professional trips are allowed. You can freely choose your means of transport as long as the physical distance of 1.5 is respected. If necessary, personal masks should be worn during commutes.
31. Whenever possible, use your own transport to get to the workplace. Those who do not come alone by car must respect a minimum distance of 1.5 meters between each person during transport. The number of people that can be transported therefore varies depending on the type of vehicle.
32. Those coming by public transport (train, tram, bus) must wear a mask and follow the instructions of the transport companies.
33. Employees/freelancers who come by car/available public transport from abroad must be in possession of an identity document and/or passport and an employer certificate or a company document (for example proof of self-employed status).
34. Drivers of production cars must not change cars and must disinfect their steering wheel, the surrounding area and the gear lever after every drive. Production vehicles intended for passenger transport must be equipped with a transparent (plastic) film between the front and rear seats (taking into account visibility and safety). The default should be a maximum of 1 passenger, unless there are several people from the same household and/or several back seats where separation can be provided by means of transparent (plastic) film.

WHAT IF AN EMPLOYEE GETS SICK ON SET?

35. This employee must report to the COVID-19 coordinator and leave the set immediately and consult a doctor. See the practical instructions in this regard on the FPS WASO website: <https://werk.belgie.be/nl/nieuws/hoe-ga-ik-als-werkgever-om-met-werknemers-die-corona-griepsymptomen-vertonen>

36. Make sure that the staff in charge of providing first aid know the necessary guidelines in the context of the coronavirus and that they have the necessary personal protective equipment available. For an overview of the instructions see this diagram: <https://drive.google.com/file/d/1xWAPv9IVKokLGrxHJpHhNIPFjReBTZS3/view>

II. SPECIFIC GUIDELINES

In addition to the general guidelines that apply to all employees of a production, separate agreements can be made with the various departments, depending on the specific characteristics of the production.

WORKING ON THE SET

- Everyone uses only their own equipment or the production manager must provide personalised equipment.
- Each department must disinfect their own equipment at the end of the shooting day.
- The set and surrounding work areas must be disinfected daily.
- We must strive for a well-thought-out division of labour on the set. Everyone must strictly adhere to his/her role and we must avoid helping each other, no matter how well-intentioned, because this can result in additional and unnecessary contact.
- The idea is to remain in your designated work area as much as possible and to avoid non-essential contacts with other departments.
- When shooting outdoors, take measures to avoid gatherings, making sure that it is clearly indicated (setting off) where the 1.5-meter boundary is.

TECHNICAL CREW

- External suppliers may only work with their own equipment (if not feasible, personalise equipment or, failing this, appropriate protective equipment must be used) and are responsible for the daily disinfecting of their equipment.
- Everyone uses personalised equipment (e.g. computer, keyboard, mouse, ballpoint pen, ...) that is disinfected before it is used by someone else.

- The presence of technical crew on the set must be kept to a minimum. Preparations should be made as much as possible at home or in another room.
- Provide extra monitors or use of an app (e.g. Viewtake) so that the recordings can be followed in another room in order to limit the number of people on the set.
- Crew who come close to the hosts/actors must wear protective clothing (not relevant as long as social distancing applies).
- Where it is not possible to keep a 1.5m distance: install a protective plate (e.g. in a production unit) and/or wear protective clothing (e.g. wear gloves when camera lenses have to be handled by different people).

TECHNICAL EQUIPMENT

- Must be disinfected daily. External suppliers must disinfect their equipment themselves.
- Headphones and walkie-talkies are personal and cannot be shared.
- Provide personalised microphones and clips for main cast.
- Make agreements with external equipment suppliers on how their material is handled and stored between shooting days.

CATERING

- The production management must provide enough space to respect the 1.5m rule. If necessary: shifts/additional spaces.
- There should be no catering table with refreshments available throughout the day in order to avoid this becoming a gathering place.
- Meals (incl. snacks) and drinks must be consumed in individual portions.
- Everyone must use their own or personalised drinking bottles or disposable bottles for hot and cold drinks.

CAST

- Loges or dressing rooms should preferably not be shared.
- All clothing should be ready in every loge so that there is no need for styling.

- Cast should respect the 1.5m rule on set as much as possible.
- The cast should wear face masks, except when in make-up and on set.
- Check whether the main cast can be quarantined in order to guarantee maximum continuity (this is not a sectoral measure), the same applies to housing cast and important crew members at a hotel (choice of the production manager)

ART DEPARTMENT

- Props must be prepared at home as much as possible. Purchases made online must be thoroughly disinfected.
- Props must be immediately disinfected by props manager or the set dresser after use.
- If possible, separate props should be provided per person (actor).
- The props manager and set dresser must wear gloves.
- If desired, the cleaning of the set can be done by the art department.

MAKE-UP (incl. HAIRDRESSER)

- Use of make-up must be kept to a minimum (no make-up for extras).
- Main cast will receive a personalised make-up kit.
- For the rest of the cast, disposable material must be used.
- Make-up artists are to be kept to an absolute minimum and must wear a surgical face mask, to be replaced at least once every 4 hours.
- Keep conversations to a minimum during the make-up session.
- The make-up/hairdressing room must be arranged in such a way that there is enough space between the work areas. If the distance between each work area is less than 1.5m a protective wall must be installed between each of them.

STYLING

- Preparations should be done at home as much as possible.
- When items need to be handed over, everything should be hung up in advance and the 1.5m rule must be respected.
- Keep the number of people to a minimum, taking into account the size of your room.
- Clothing must be cleaned after use, before being worn by another person.
- Disinfect your own equipment daily.

PRODUCTION/PRODUCTION OFFICE

- Telework remains the norm. Whatever can be done from home should be done from home.
- If this is not possible: provide at least 1.5m between each workstation. The distance must be marked.
- If this distance cannot be respected, a protective wall must be installed.
- Keep the number of people to a minimum, taking into account the size of your room.
- Only use personalised material (computer, keyboard, mouse, fixed workstations).
- Use digital documents as much as possible (scripts, contracts, call sheets). If this is not possible, everyone must have a personal copy.
- Disinfect your own equipment daily (incl. mobile phone).
- Spread out call hours as much as possible in order to avoid too many people at once.

POSTPRODUCTION

- If it is possible to edit at home, this must be done at home or at a post-production company as long as the social distancing and necessary hygiene measures can be respected there.
- If it is not possible to edit at home: provide at least 1.5m between editor and director. The distance should be marked.
- If this distance cannot be respected, a protective wall must be installed.

- Only use personalised material (computer, keyboard, mouse, fixed workstation).
- Editing stations and hardware must be disinfected daily.

SCHEDULE

- Spread out call hours as much as possible.
- Keep recesses (scouting visits) to a minimum and respect the general guidelines and transport guidelines.

CASTING

- Casting should be done as much as possible via video conferencing or video auditions.
- If this is not possible, the contact surfaces in the casting room and equipment must be disinfected between auditions.

STUDIO ACCESS

- The number of people present in the studio during recording must be kept to a minimum.
- A safe distance must be guaranteed from arrival to seating. (staggered arrival times, numbered seats at a safe distance from each other, etc.). Wearing a face mask is mandatory until taking one's seat.
- A limited number of people in bubbles (under the composition rules in place at the time and subject to 1.5 m distancing between bubbles) can be admitted to the studio to participate in the production in a COVID-19-secure manner, as and when required by the programme.
- Everyone present will be given full details beforehand of the COVID-19 measures in place on the set. Shortly before the shoot people will once again be reminded to stay home if sick.
- Drinks will be provided in a personal bottle only.

This document is a translation. In the event of doubt or a dispute the original Dutch version of the sector-specific guidelines shall apply.
